4. SQLite – The database type

Project Setup

To set up:

Follow the instructions provided in the 'Deployment Documentation' to open Obsidian Sound. Open the main HTML file from the downloaded source code in order to launch the page.

Using Obsidian Sound

After launching from the source code's main HTML file, the application should open up and direct the user to the Obsidian Sound page.

To use:

The required characters needed to operate the soundboard and initially displayed on the 6x4 board button. Simply press the matching character key for whichever button you wish to play and the assigned audio will play. To control the board's volume, use the volume slider to the left of the soundboard; dragging it up or down with the cursor will increase or decrease the volume, respectively.

If you wish to remove the character display on the buttons, simply press the '.' key (the period key) in order to toggle the display of the characters on or off.
